DATE MAILED: 03/10/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/960,618

Applicant(s)

OTSUKI, KOICHI

Examiner

LAM S NGUYEN

Art Unit

2853

-- Th MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 December 2002.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-40 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-40 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 21 September 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s) _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Ohkoda (US 6457803).

Ohkoda discloses a dot-recording device (FIG. 14) for recording ink dots on a surface of a print medium (FIG. 14, element 127) with the aid of a dot-recording head (FIG. 14, element 124) provided with a plurality of dot-forming elements (FIGS. 15-16, element 125) for ejecting ink droplets, the dots recording device comprising:

a main scanning unit configured to drive the dot-recording head and/or the print medium to perform main scanning (FIG. 14, element CONTROL SECTION);

a head driver configured to drive at least some of the dot forming elements to form dots during the main scanning (FIGs. 15-16);

a platen (FIGs. 15-16, elements 121, 123, 122) configured to extend in the main scanning and to be disposed opposite the dot-forming elements at least along part of a main scan path direction (FIG. 14, element 121), and the platen being configured to support the print medium at a position opposite the dot-recording head (FIG. 14);

a sub-scanning unit (FIG. 15-16, element 139) configured to move the print

Art Unit: 2853

medium to perform sub-scanning in between the main scans; and

a controller configured to control the dot recording device, wherein the platen has a slot (FIG. 15-16: spaces between elements 121-123) extending in the main scanning direction a width of the slot in the sub-scanning direction corresponding to a specific sub-scanning range on a surface of the dot recording head including not entirely but part of the plurality of dot-forming elements (FIG. 15-16, element 125).

Referring to claims 2, 16-17, 20, 31, 32, 40: wherein the specific sub-scanning range includes at least one of two end ranges in the sub-scanning at opposite ends of the dot-recording head, each end range including at least one dot-forming element (FIG. 15-16), and wherein the controller has:

(a) a first recording mode to effect printing near an edge of the printing medium in the first recording mode the controller performing edge printing by ejecting ink droplets from at least some of the dot-forming elements disposed opposite the slot when the print medium is supported on the platen, and the edge of the print medium is disposed above the slot (column 6, line 45-60), and

(b) a second recording mode to effect printing in an intermediate portion of the

Art Unjt: 2853

print medium, a maximum sub-scan feed amount in the second recording mode being greater than a maximum sun-scan feed amount in the first recording mode (column 6, line 60-67).

Referring to claims 4 and 22: wherein the slot is disposed at a position opposite a dot-forming element that is located at a downstream edge in the sub-scanning direction; and the controller performs the edge printing when a front edge of the print medium is disposed above the slot (FIG. 15, element 132).

Referring to claims 5 and 23: wherein the slot is disposed at a position opposite a dot-forming element that is located at an upstream edge in the sub-scanning direction; and the controller performs the edge printing when a rear edge of the print medium is disposed above the slot (FIG. 16, element 13).

Referring to claim 6: wherein the sub-scanning unit comprises:

an upstream sub-scanning unit configured to hold and move the print medium, the upstream sub-scanning unit being disposed on an upstream side in the sub-scanning direction with respect to the dot-recording head (FIG. 15, elements 128 and 129); and

a downstream sub-scanning unit configured to hold and move the print medium, the downstream sub-scanning unit being disposed on a downstream side in the sub-scanning direction with respect to the dot-recording head (FIG. 15, elements 130-131).

Referring to claims 8 and 25: wherein the controller performs the edge printing on the basis of image data representing an image extending outside the print medium beyond the edge on which the edge printing is performed (FIG. 15-16).

Referring to claim 9: wherein a length of an area of the image outside the print medium is set less than the slot width (FIG. 15-16).

Referring to claim 14: wherein the platen comprises:

a first support (FIG. 15, element 123) configured to support the print medium, the first support extending in the main scanning direction at a position opposite a first sub-group of dot-forming elements selected from the plurality of dot-forming elements;

a first slot (FIG. 15: the slot on the left of element 123) extending in the main scanning direction at a position opposite a second sub-group of dot-forming elements which are disposed in the sub-scanning direction downstream from the first sub-group of dot-forming elements;

a second support (FIG. 15, the middle element 121) configured to support the print medium, the second support extending in the main scanning direction at a position opposite a third sub-group of dot-forming elements which are disposed in the sub-scanning direction downstream from the second sub-group of dot-forming elements.

Referring to claim 3 and 21: wherein the controller prevents ink droplets from being ejected by dot-forming elements other than the dot-forming elements disposed opposite the slot during the edge printing (column 6, line 45-59).

Referring to claims 7, 24: wherein the sub-scanning of the first recording mode is performed in a feed amount corresponding to a single dot pitch in the sub-scanning direction (FIG. 15-16).

Referring to claims 10, 18, and 26: wherein the platen has:

an upstream slot (FIG. 16, element 133) that extends in the main scanning direction at a position opposite a dot-forming element disposed at an upstream edge of the dot-recording head in the sub-scanning direction

a downstream slot (FIG. 16: the last slot on the left of element 122) that extends in the main scanning direction at a position opposite a dot-forming element disposed at a downstream edge of the dot recording head in the sub-scanning direction.

the controller comprises a print data storage unit which stores print data partially composed of image data for recording images in an expanded area that extends lengthwise beyond at least the front and rear edges of the print medium (The corresponding memory stores the print data to be printed in FIG 15 and FIG 16); and an edge printing unit that ejects ink droplets onto the expanded area on the basis of the print data.

Referring to claims 13, 30, 33, 35, 39: wherein the print data includes information about a recording condition of dots in pixels in the expanded areas (column 6, line 26-44).

Referring to claim 15: wherein the platen comprises:

a first support (FIG. 15, element 123) configured to support the print medium, the first support extending in the main scanning direction at a position opposite a first sub-group of dot-forming elements selected from the plurality of dot-forming elements;

a first slot (FIG. 15, the slot on the left of element 123) extending in the main scanning direction at a position opposite a second sub-group of dot-forming elements which are disposed in the sub-scanning direction downstream from the first sub-group of dot-forming elements;

a second support (FIG. 15, element 121) configured to support the print medium, the second support extending in the main scanning direction at a position opposite a third sub-group of dot-forming elements which are disposed in the sub-scanning direction downstream from the second sub-group of dot-forming elements; and

Art Unit: 2853

a second slot (FIG. 15, slot 132) extending in the main scanning direction at a position opposite a fourth sub-group of dot-forming elements which are disposed in the sub-scanning direction downstream from the third sub-group of dot-forming elements.

Referring to claims 12, 28, 37, 29, 38: wherein the platen further has a pair of lateral slots (FIG. 6, elements 44a-b) separated apart at a distance substantially equal to a width of the print medium (FIG. 6, element 41), the lateral slots extending in a sub-scanning range in which ink droplets are ejected from the plurality of dot-forming elements; and the dot-recording device further comprises a guide for positioning the print medium in the main scanning direction such that the print medium is supported on the platen (FIG. 6, element 48), and that the two edges of the print medium are kept at positions above the corresponding lateral slots.

Referring to claims 11, 27, 36: wherein the controller comprises:

an upper-edge positioning unit (FIG. 15: element 121 on the left of element 123)) which selects the position of the print medium in the sub-scanning direction such that when ink droplets are ejected onto the front edge of the print medium (FIG. 15), the print medium is supported on the platen, the front edge of the print medium is brought to a point above the downstream slot (FIG. 15, element 132), and the front edge reaches a point located in the sub-

Art Unit: 2853

scanning direction upstream of the dot-forming element on the downstream edge in the sub-scanning direction; and

a lower-edge positioning unit (FIG. 16, the middle element 121) which selects the position of the print medium in the sub-scanning direction such that when ink droplets are ejected onto the rear edge of the print medium (FIG. 16), the print medium is supported on the platen, the rear edge of the print medium is brought to a point above the upstream slot, and the rear edge of the print medium reaches a point located in the sub-scanning direction downstream of the dot-forming elements on the upstream edge in the sub-scanning direction.

Response to Arguments

Applicant's arguments with respect to claims 1-40 have been considered but are moot in view of the new ground(s) of rejection.

Regarding to the argument on page 5: The applicant argued that the Meyer reference fails to disclose that "a width of the slot in the sub-scanning direction corresponding to a specific sub-scanning range on a surface of the dot recording head including not entirely but part of the plurality of dot-forming elements". However, as discussed above, the Ohkoda reference discloses all limitations in the claims 1-40. Therefore, all claims are unpatentable.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 2853

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

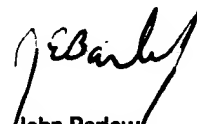

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LAM S NGUYEN whose telephone number is (703)305-3342. The examiner can normally be reached on 7:00AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, JOHN E BARLOW can be reached on (703)308-3126. The fax phone numbers for the organization where this application or proceeding is assigned are (703)305-3431 for regular communications and (703)305-3432 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0956.
